## E-Safety Jargon Buster..

A firewall is a tool which checks information coming into or going out of a network/computer to see if it meets pre-determined criteria. If the criteria aren't met, the information will be rejected by the firewall. Many schools have firewalls to protect pupils from inappropriate content

Search engines, such as Google, and some websites, such as Facebook, have privacy settings so you can control how much of your personal information is in the public domain.
